Avant propos :

Nous proposons ci-après la liste des Hyménoptères Symphytes de France classés par ordre systématique. Ce travail est inédit car aucune liste des Symphytes de France n'a jamais été publiée.

Nous avons appliqué pour ce travail les travaux les plus récents, notamment ceux de notre collègue français Jean LACOURT qui a fortement fait évoluer la classification des Tenthredinidae.

Dans cette liste, nous avons éliminé les espèces anciennement citées (avant 1950) sans localités ni dates précises et qui n'ont pas été retrouvées dans les collections des différents musées français mais nous avons inclus les espèces nouvelles pour la France ou pour la science, dont les publications sont en cours ou sous presse.

Enfin, nous dressons en fin du document la liste des travaux sur lesquels nous nous sommes appuyés pour la réalisation de ce travail.
